

TOPIC PROPOSAL

NAME: “*HELLO(AI)WORLD*”

HOW TO CHAT WITH CHAT BOTS

AI is a fresh field for everyone. And venturing into the unknown can sometimes be frustrating, and rightly so! Mastering new skills is always challenging, but rest assured, no need to search any longer for your AI needs and inquiries.

Looking for tips on how to communicate effectively with AI? I've got your back! Whether you're not getting the outcome expected or just starting out and seeking guidance, you've come to the perfect spot!

SIGNIFICANCE

Artificial Intelligence (AI) is a new and ever-evolving field that can seem daunting to those not immersed in technology. The idea of interacting with a machine may be overwhelming for many, despite (and maybe because of,) the undeniable power and potential that AI holds. It's crucial to understand that the effectiveness of AI largely depends on how it's utilized. As someone who prides myself on staying at the forefront of technological innovation, I recognized early on that AI was set to remodel our perception of the world.

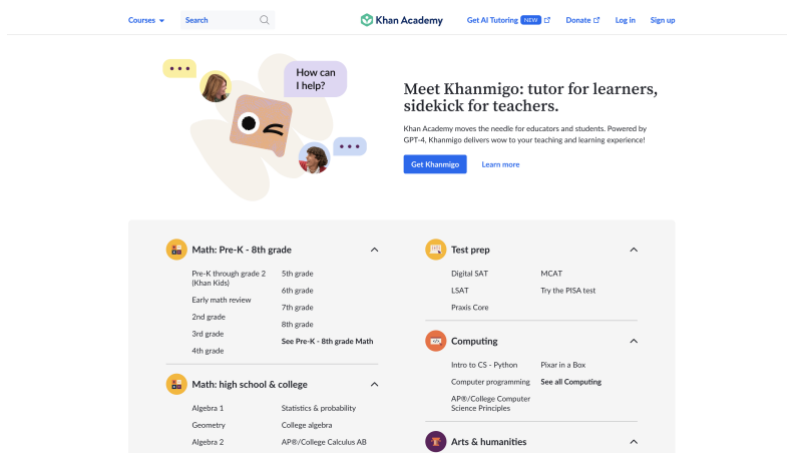

People's attitudes towards AI generally fall into one of two categories: there are those who feel intimidated by AI due to a lack of understanding, hesitant to engage with it ("I have no idea what AI is and it scares me, so I've avoided it"), and then there are the enthusiasts who embrace AI with open arms, experimenting with it at every opportunity ("I can't get enough of AI! I use it constantly and love it!"). Rarely do you find someone straddling the line between these two extremes.

My goal is to narrow this divide by offering support and education to those unfamiliar with AI, helping them understand and integrate it into their lives effectively. At the same time, I aim to provide valuable insights to the fanatics who, regardless of their enthusiasm, might not be leveraging AI to its fullest potential.

Whether you're new to AI and seeking foundational knowledge or an experienced user looking for tips to optimize your interaction, this is your go-to resource.

My design inspiration and aesthetic guiding my approach to this project

is [Khan Academy](https://www.khanacademy.org/). The seamless integration of learning and the positive affirmations set it apart from any other learning platform.

INTERVIEW STRATEGIES

When approaching interviews, I intend to prepare a script that will cover a set of questions to drive the conversation, I will also keep a chatbot up and ready for those who might express an immediate interest in experimenting with it while engaging in the interview process. My plan will include scheduled interviews with a diverse group in order to cover a broad spectrum of experiences and skill sets related to AI.

Specifically, I aim to interview:

1. A colleague who incorporates AI into their daily routine, relying on it for various tasks and projects. This will help me understand how AI enhances productivity to those immersed in it everyday,

2. Two or three individuals who have used AI before, although not extensively. This group will help give us insight on the casual or professional use of AI technology and what specific tools fit with their perspective role/task,
3. And two individuals who have zero experience with AI and wanting to learn. Their experiences and insight will shed light on the overall approach to AI, as well as debunking misconceptions and challenges non-users worry about.

With this strategy, my goal is to capture a wide array of perspectives, from the seasoned AI user to the beginner. With diverse input, comes enriched research and data, and enriched data provides us a well-rounded view of how AI is perceived and used.

Questions in mind, but not set in-stone:

- **For the Experienced User:**

- What are your initial thoughts when you hear AI?
- How has using AI in your daily workflow impacted productivity and efficiency?
 - Can you share specific examples of tasks or projects where AI has been beneficial?
 - What about any challenges with AI?
- Do you have any favorite AI applications or platforms that you use regularly? If so, what draws you to them?
- Do you remember what a day-in-the-life was like without AI tools? Tell me about it.

- **For the Occasional User:**

- What are your initial thoughts when you hear AI?
- How often have you used AI tools? What are you most familiar with?
- Have you ever felt hesitant or resistant to using AI? If so, why?
 - Anything specific preventing you?
- Can you share any specific experiences, positive or negative, you've had with AI technology?
- Are there any specific areas or tasks where you think AI could be beneficial, but you're unsure how to integrate it into your daily life?

- Any particular instance when you thought “knowing how to use AI effectively would be helpful here?”?
- **For the Rookie User:**
 - What are your initial thoughts when you hear AI?
 - Is there a particular reason you have not tried any chat bots out yet? If so, can you share?

LEARNING OUTCOMES

- Understanding of AI in daily flows,
- The perception and barriers of AI,
- User experience with AI technology,
- And (Personally) a deeper more well-rounded understanding of not only AI, but on developing a website from scratch.
